Current to: 2023-11-13

hps+ in safety gear - When you need chemically resistant, pressure-resistant sensors.

HIGHLIGHTS

- › Optionally used in normal pressure or overpressure
- › PTFE membrane › for protection against aggressive media
- › Stainless-steel or optional PVDF housing for hps+340 › for use in the food industry
- › Sealed against the housing with an O-ring made from FFKM › for the highest possible chemical resistance
- › Digital display with direct measured value output in mm/cm or %
- › Numeric configuration of the sensor using digital display
- › UL Listed to Canadian and US safety standards

BASICS

- › 2 switching outputs in pnp variant
- › Analogue output plus 1 pnp switching output
- › 4 detection ranges with a measurement range of 30 mm to 8 m
- › microsonic Teach-in using T1 or T2 buttons
- › 0.025 mm to 2.4 mm resolution
- › Temperature compensation
- › 9–30 V operating voltage
- › LinkControl › for configuration of sensors from a PC

Description

For fill level measurements of aggressive media and in overpressure

the ultrasonic transducers of the new hps+ sensors are now fitted out - as standard - with a PTFE film. It is sealed with a FFKM O-ring against the housing made of 1.4571 stainless steel or PVDF. This ensures a high degree of resistance to aggressive media.

Fill level measurement in tanks

The hps+ sensors can be used for fill level measurement under normal pressure or in tanks and containers with an overpressure of up to 6 bar. Its special software filters also allow its use in containers filled from above or that have a stirring system.

Pressure-tight installation in a tank is undertaken by means of a 1" threaded flange or a 2" one in the case of hps+340.

Chemical resistance

and seal tightness were tested through being stored over cellulose thinner and 1,000,000 alternating pressure stresses. Cellulose thinner is extremely corrosive and has a high rate of penetration.

hps+340 in highly resistant PVDF housing - PTFE protective film sealed with an O-ring made from FFKM against the housing

Two different output stages are available for four detection ranges:

2 switching outputs in pnp switching technology

1 analogue output with an additional pnp switching output

The hps+ sensors with switching output have three operating modes:

- › Single switching point
- › Two-way reflective barrier
- › Window mode

Two three-colour LEDs

always show the current state of the switching outputs or the analogue output.

With TouchControl

all configuration can be done right at the sensor. The easily legible three-digit LED display continually shows the current distance value and automatically switches between millimetre and centimetre displays.

Setting a switching or analogue output

can optionally be carried out by numeric input of the desired distance values, or using a Teach-in procedure. This permits the user to select the configuration method preferred. The hps+ sensors support synchronisation and multiplex operation and have extensive parameterisation options via LinkControl.

Further information on how to set up hps+ sensors can be found at [mic+ sensors](#).

LinkControl

consists of the **LinkControl adapter** and the **LinkControl software** and facilitates the configuration of the hps+ sensors via a PC or laptop with any conventional Windows® operating system.

Sensor connected to the PC via LCA-2 for programming
